Backup And Archiving

Backup and Archiving

- An online backup solution offering high speed off-site managed backup for Servers and PCs at a price to beat the credit crunch. Unlimited storage for PCs and servers, no setup fees, or licence fees just common sense prices.
- Incremental backups – after the initial backup only file changes are backed up
- CDP – continuous data protection – unlike most other products which only offer this feature on exchange mail servers RecoveryVault will monitor any file selected for backup and instantly backup any file changes as they happen across all Servers, PCs and Macs
- Additional optional user selected encryption
- Global access to your backed up files from a web browser
- Automated email reporting on all backups
- Multiple backup sets per client
